OBJECTIVE

BTech Computer Science and Engineering student with a strong passion for technology and innovation. Skilled in programming and software development, with a keen interest in applying academic knowledge to practical solutions. A fast learner and proactive problem-solver, committed to contributing effectively to collaborative projects in the tech industry.

SKILLS

Technical Skills: Python, HTML, CSS, Tailwind CSS, MySQL, MongoDB, SQLite, React, Node.js

Languages: English (Fluent), Tamil (Work Proficiency), Malayalam (Native).

EXPERIENCE

1. YELLOWFISH DIGITAL INNOVATIONS | JULY 2023-JULY 2023

This internship enhanced my knowledge of e-commerce web technologies and equipped me with practical skills for future projects. I recommend focusing on web development and data analytics while continuing investments in advanced visualization tools to drive business growth

PROJECTS

1. DUCKHUNT| INDIVIDUAL| MAY 2026

DuckHunt is an interactive browser-based arcade game where players use hand gestures captured through a webcam to aim and shoot moving ducks in real time. The project combines computer vision, gesture interaction, real-time rendering, and modern frontend technologies to create an immersive gaming experience directly inside the browser. The application follows a Spec-Driven Development (SDD) approach with modular architecture, documented planning, technical specifications, and structured task tracking.

2. KNOWLEDGE EXPLORER | INDIVIDUAL | MARCH 2026

Developed a full-stack AI-powered sports knowledge base using ReactJS, FastAPI, and LangChain with Groq's LLaMA 3.3 model, where users can browse articles and ask an AI assistant questions. Built RESTful APIs for article retrieval and AI chat functionality, using prompt engineering to restrict AI responses strictly to article content. Styled a responsive UI with Tailwind CSS and managed application state using React hooks like useState and useEffect.

3. ATTENDANCE SYSTEM USING FACIAL RECOGNITION | INDIVIDUAL | NOV 2025-DEC 2025

A full-stack biometric attendance system using facial recognition, built with a React.js frontend and a Python Flask backend. It uses DeepFace to generate facial embeddings and verify identities against an SQLite database in real time. The system replaces manual roll calls with fast, contactless, and highly accurate AI-based attendance tracking.

EDUCATION

- HINDUSTAN INSTITUTE OF TECHNOLOGY AND SCIENCE | CHENNAI, TAMIL NADU | 2022-2026 | CGPA-9.2/10
- MATHA SENIOR SECONDARY SCHOOL | ALAPPUZHA, KERALA | 12TH | 2022 | GRADE-78%
- MATHA SENIOR SECONDARY SCHOOL | ALAPPUZHA, KERALA | 10TH | 2020 | GRADE-87%
